

Objective

To build the tallest free standing tower with the equipment provided with the marshmallow(s) on top of the tower, all within 18 minutes.

The height that will be taken into account is from the base of the tower to the lowest part of the marshmallow(s).

Approach

Draw up a design and plan for your tower before building it.

How can you build something great if you don't plan first?

Objective

To build the tallest free standing tower with the equipment provided with the marshmallow(s) on top of the tower, all within 18 minutes.

The height that will be taken into account is from the base of the tower to the lowest part of the marshmallow(s).

Approach

Forget everything you know about planning or trying to get the design right. Instead, build a number of successive prototypes and iterate your structures with what you learned from the previous prototype.

How can you build something without trying it out first?
